

$$\text{Heat-current vector field } J_i(a) = \sum_b \Xi_{ab} (T_{00}^{\Xi}(b) - T_{00}^{\Xi}(a)) \hat{e}_{ab}^{(i)}$$

on a representative regime (P5, $N=50$, single seed); arrow colour by $|J|/|J|_{\max}$

✗ matter cores (top 5% $|T_{00}^{\Xi}|$)
